The occurrence charts provide information about when each bird species can be found at the Lehigh Gap Nature Center. **If you find a species that is not listed, please contact the nature center.**

*c* - common; *should be seen on most visits to the nature center*

*f* - fairly common; *likely to be seen in appropriate habitat*

*u* - uncommon; *unlikely to be seen, scarce*

*r* - rare; *very unlikely to be seen; few records*

# CHECKLIST OF BIRDS

## Lehigh Gap Nature Center

Since its inception in 2002, the wildlife refuge at the Lehigh Gap Nature Center has been an excellent location for bird observation in northern Lehigh and southern Carbon Counties. The 750-acre refuge is home to a variety of habitats, including grasslands, scrub, wetlands, riparian zone, and forest.

This collection of different habitats attracts a large variety of birds throughout the year. As of 2012, 169 bird species have been recorded at the refuge, many of which can be found breeding during the summer months. Several regionally uncommon species, including Prairie Warblers and Blue Grosbeaks breed on the refuge, both taking advantage of the restored grassland.

An up-to-date list of bird species recorded at the nature center can always be found on LGNC's webpage, [lgnc.org](http://lgnc.org).
